Packt Publishing Limited, United Kingdom, 2016. Paperback. Condition: New. 3rd Revised edition. Language: English. Brand new Book. Develop sophisticated mapping applications from scratch using Python 3 tools for geospatial developmentAbout This Book* Build web applications based around maps and geospatial data using Python 3.x* Install and use various toolkits and obtain geospatial data for use in your programs* This practical, hands-on book will teach you all about geospatial development in PythonWho This Book Is ForThis book is for experienced Python developers who want to learn about geospatial concepts, obtain and work with geospatial data, solve spatial problems, and build sophisticated map-based applications using Python.What You Will Learn* Access, manipulate, and display geospatial data from within your Python programs* Master the core geospatial concepts of location, distance, units, projections, and datums* Read and write geospatial data in both vector and raster format* Perform complex, real-world geospatial calculations using Python* Store and access geospatial information in a database* Use points, lines, and polygons within your Python programs* Convert geospatial data into attractive maps using Python-based tools* Build complete webbased mapping applications using PythonIn DetailGeospatial development links your data to locations on the surface of the Earth. Writing geospatial programs involves tasks such as grouping data by location, storing and analyzing large amounts of spatial information, performing complex geospatial calculations, and drawing colorful interactive maps. In order to do this well, you'll need appropriate tools and techniques, as well as a thorough understanding of geospatial concepts such as map projections, datums, and coordinate systems. This book provides an overview of the major geospatial concepts, data sources, and toolkits. It starts by showing you how to store and access spatial data using Python, how to perform a range of spatial calculations, and how to store spatial
